

IDIPS 2016

Fourth International Document
Information Processing Summer School
Samos Island, Greece
4-8 July 2016

We are pleased to announce the 4th annual IDIPS summer school is now taking applications for summer 2016. This year IDIPS will take place on the island of Samos, Greece, 4-8 July, 2016.

IDIPS, the international document information processing school, this year is expanding to include natural language processing (NLP). Document analysis systems (DAS) nowadays use more NLP in order to improve their precision. The two fields share common problems and even techniques. It is our intention to prepare young researchers of both fields to combine knowledge from NLP and DAS in order to solve modern problems. IDIPS will include lectures of basic and advanced knowledge from the fields of DAS and NLP, as well as from machine learning, very useful for both fields.

The week will include lectures on:

- Overview of OCR methods
- Overview of NLP
- Machine Learning
- Deep Learning
- HMMs
- Document Image processing techniques
- Statistical Language Models
- Handwriting recognition techniques
- Evaluation and Performance Analysis
- Document Retrieval techniques

The cost is 625€ (early registration). This includes lodging and most meals. The due date for early registration is 30 April 2016.

We look forward to seeing you or your students there.
